

Quang Phu Hung

Backend AI-oriented student building full-stack systems

0971012407 | qphunguit@gmail.com | [linkedin.com/in/phu-hung-quang](https://www.linkedin.com/in/phu-hung-quang) | github.com/Prosperum26

EDUCATION

University of Information Technology (UIT) – VNUHCM Ho Chi Minh City, Vietnam
B.Sc. in Information Systems (Expected 2028) 2024 – Present
Academic Excellence Scholarship – Ranked 1st in Information Systems, Advanced Program Semester 1, AY 2025–2026

EXPERIENCE

Team Leader, WebDev Adventure 2026 – Consolation Prize Mar 2026 – May 2026

WebDev Studios Club & University of Information Technology (UIT), VNU-HCM

- Led a 5-member team to develop GreenGrass, a green event management platform for the Vietnam National University Ho Chi Minh City community
- Coordinated task distribution, monitored development progress, and managed collaboration workflow throughout the project
- Reviewed pull requests, merged code contributions, and maintained development consistency across the team
- Collaborated on project planning and reviewed business-related reports including project cost and sustainability considerations
- Presented and demonstrated the completed platform during the competition evaluation process

Participant, NAVER Vietnam AI Hackathon 2025 Sep 2025

- Completed the preliminary assignment: building a To-Do Android application
- Self-studied Flutter to understand mobile app architecture and build process
- Gained hands-on experience with project structure, UI components, and application deployment workflow

PROJECTS

GreenGrass | *ReactJS, NestJS, PostgreSQL, Prisma* | Frontend | Backend Mar 2026 – May 2026

- Developed a full-stack green event management platform using ReactJS, NestJS, PostgreSQL, and Prisma ORM
- Designed JWT-based authentication with refresh token workflows and role-based access control
- Engineered anti-fraud event check-in using dynamic QR rotation and GPS verification
- Implemented CI/CD pipelines with GitHub Actions alongside automated testing and deployment workflows
- Integrated Cloudinary for image storage and Swagger/OpenAPI for API documentation

Diabetes QnA System (RAG - Local LLM) | *Python, ChromaDB, Ollama* | GitHub Nov 2025 – Feb 2026

- Built an end-to-end Retrieval-Augmented Generation (RAG) system for domain-specific Q&A on diabetes knowledge
- Processed and indexed 100+ medical documents using ChromaDB for scalable semantic retrieval
- Implemented a complete data pipeline including web crawling, data cleaning, preprocessing, and chunking
- Developed retrieval mechanisms using vector embeddings to provide context-aware inputs for answer generation
- Integrated local LLM inference via Ollama for fully offline response generation

Chuck King (AI Rage Platformer) | *JavaScript, HTML5 Canvas* | GitHub 2025

- Developed a 2D vertical platformer using HTML5 Canvas with custom physics and collision systems
- Designed a modular game architecture using OOP principles and event-driven systems
- Implemented an adaptive AI taunting system reacting to player behavior such as repeated falls and inactivity
- Integrated optional external LLM APIs for dynamic dialogue generation

TECHNICAL SKILLS

Languages: C++, Python, JavaScript/TypeScript, SQL

Frontend: ReactJS, Tailwind CSS, HTML, CSS

Backend: Node.js, NestJS, RESTful APIs, JWT Authentication, RBAC

Databases: PostgreSQL, Prisma ORM, SQL Server, MongoDB

AI/ML: NumPy, pandas, RAG pipeline, Vector Embeddings, Prompt Engineering, LLM Integration (Ollama)

DevOps & Tools: Git, GitHub Actions, CI/CD, Docker, Swagger/OpenAPI, Postman, Vercel, Render, Cloudinary, Figma
